

Sybil

Chado: Open Source Database

Sequence

Companalysis

General

Organism

CV

- Collaborative relational database ~15 people.
 - Flybase/Harvard
 - GMOD Consortium
- Composed of several modules
- Freely available as open source
- Many support tools under development by several laboratories. (see www.gmod.org)

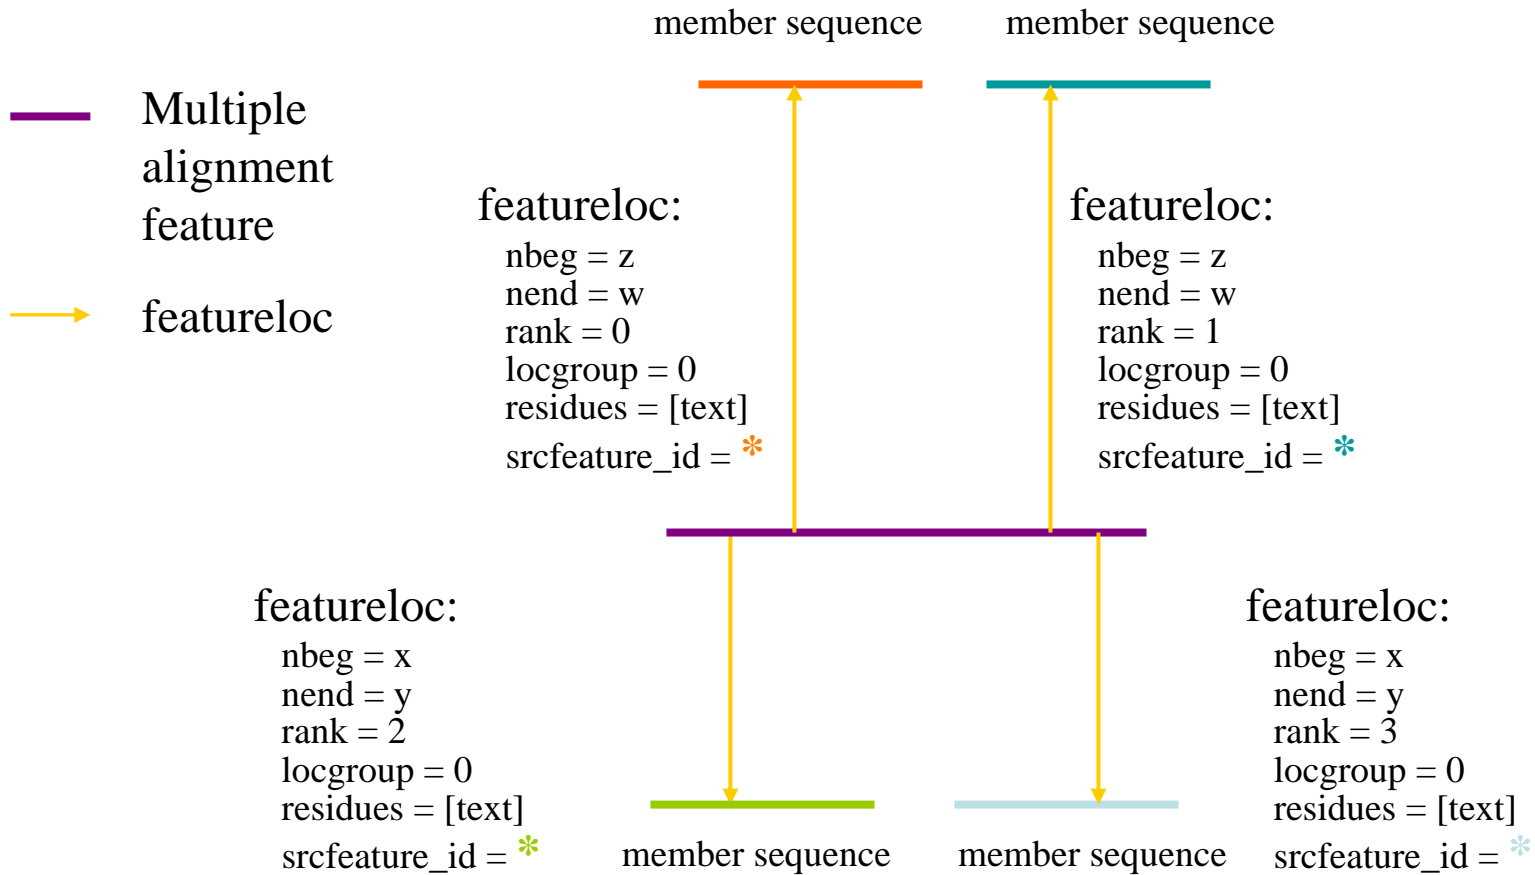

Annotation attributes

Scaffold mappings

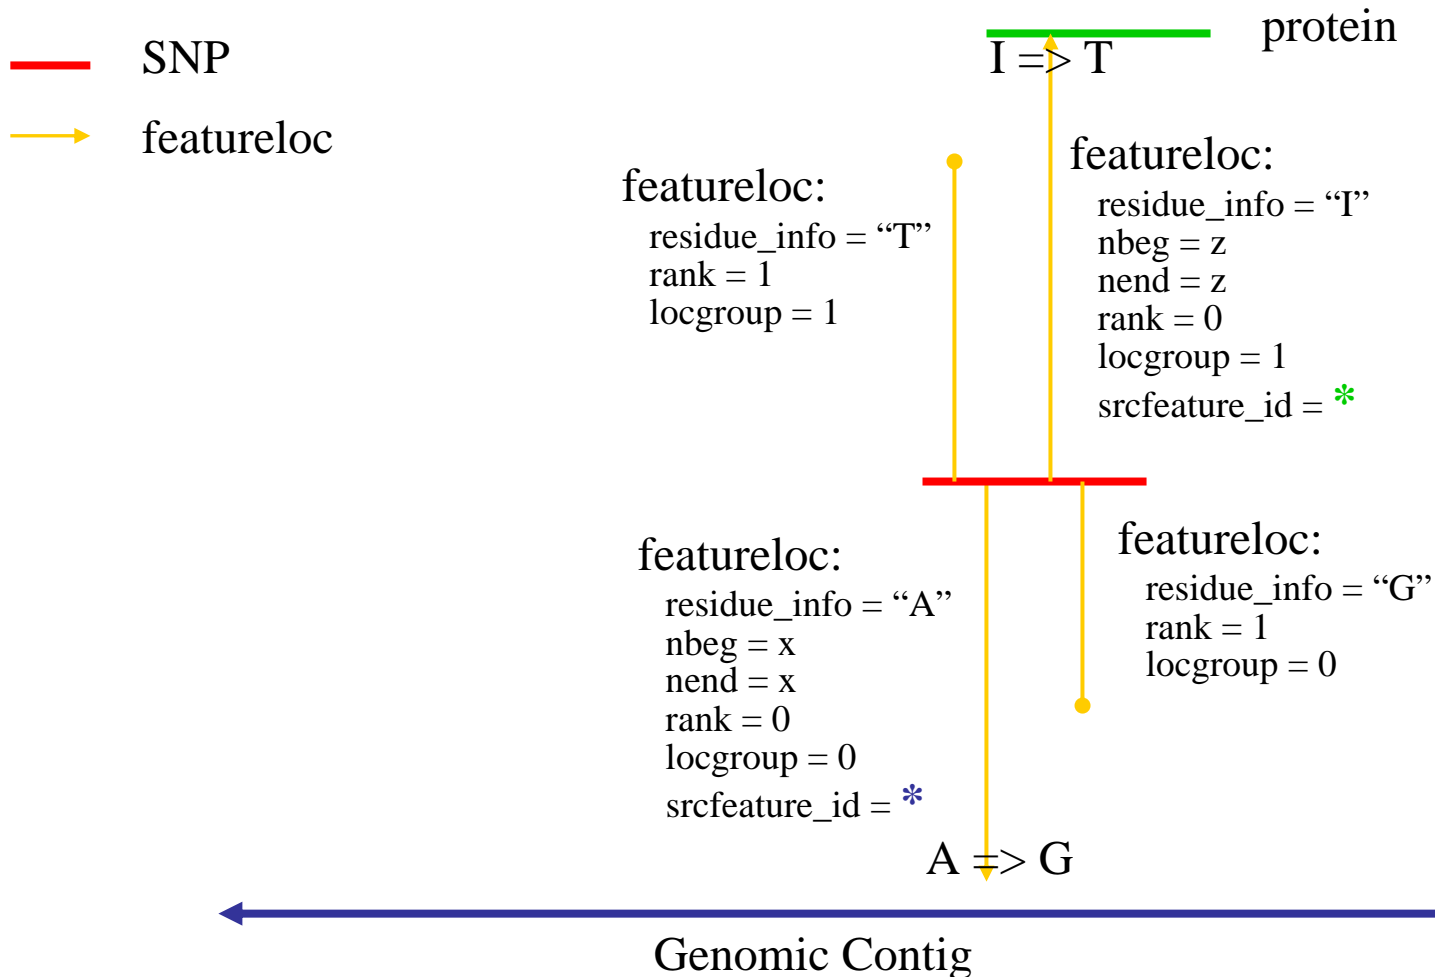

Multiple alignments

Sequence variations

SNPs (redundant mapping to protein)

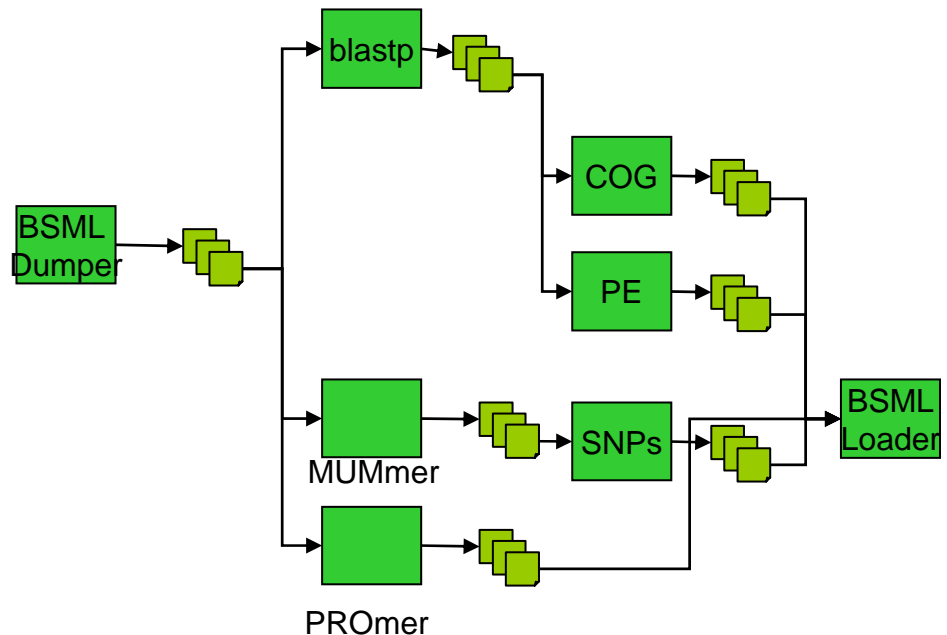

Chado

- No serious performance issues
- Many labs
- Modular
 - Sequence module is stable
- Extensive use of CV-terms
- Usage of datatypes documented

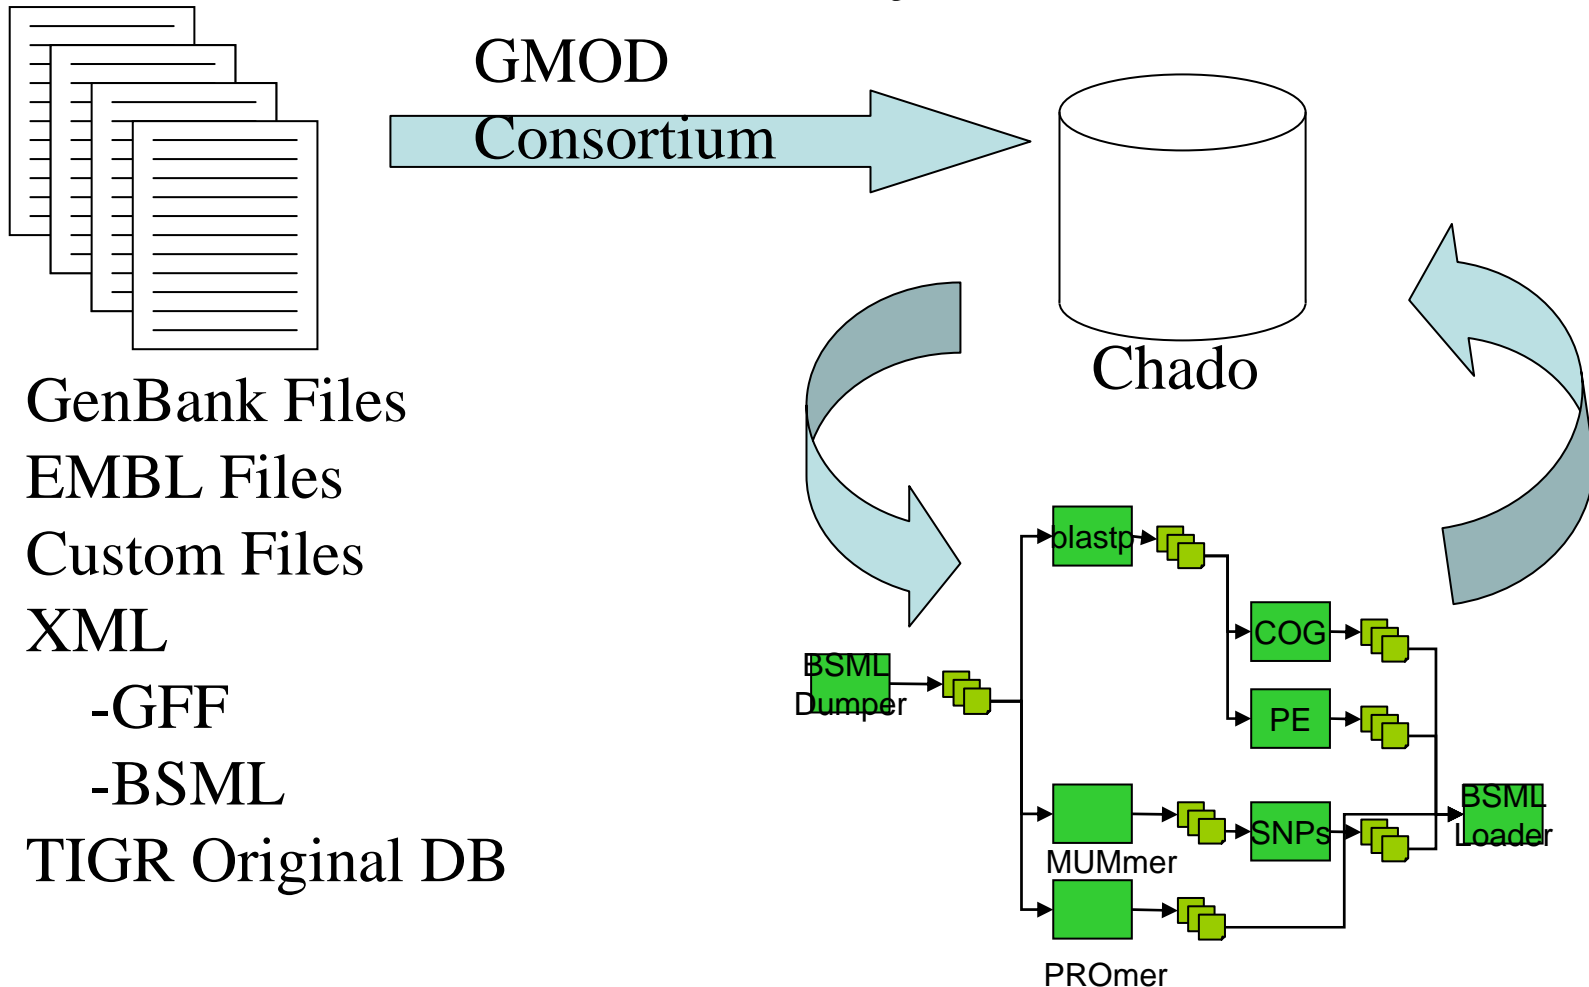

Workflow Computes

- Blast
- Position effect
(conserved gene order)
- MUMmer
 - SNPs
- PROmer
 - COGs
 - Paralogs

Primary output: BSML-XML

Data Prep For Comparative Analysis

Sybil

- **Sibyl** ancient Greek word *sibylla*, meaning prophet, someone who speaks by divine inspiration;
- Workflow system + chado db + interface

Sybil

- Workflow system → chado db
- Interface
 - Three-tiered perl architecture
 - Pushes pages to web browser
 - Many reports
 - All graphics are in svg

Sybil-searches

- All v all blastp searches
- Mummer
 - Nucleotide
 - Protein

Sybil-clustering

- Jaccard -- paralogs
 - pairs of proteins form networks
 - Edges of networks are evaluated
 - Scoring system set by user
- COGs – bidirectional best hits
- Jaccard COG-clustering
 - transitive closure
 - forms Jaccard reps from all genomes
 - multiple Jaccard reps from same genome.

Sybil-smoothing

- Position effect
 - pairwise protein matches to identify distinct sequence segments in which the gene order and orientation are conserved.
 - window_size, gap_penalty, gene_count_cutoff, gene_length_cutoff, min_matches_per_window , orientation
- Collection of genes into blocks based on J-COGs

44 BLOCK(S) OF SIZE 4**[RGAPS 0->11;1->15;2->15;3->2;4->1] [TGAPS 0->15;1->15;2->10;3->3;4->1]**
